## SGIP.org Launches; Member Registration for 2013 Now Available

After nearly a year of planning together, working together, and pulling together, the next generation of SGIP is ready to launch. Two milestones occurred this past week when SGIP.org officially launched and the new Member Application was emailed out to existing SGIP member representatives.

On this new website, you will find everything you need to convert your membership to the new SGIP, including a Membership Application, the By-Laws and IPR Policy. Please feel free to contact us with specific questions you

might have about how to move forward.

Among the alliances vying to help you achieve your business and technical objectives, SGIP is uniquely positioned in its function and capability enabling collaboration between industry stakeholders to provide your organization with the best chance of success in the build out of the Smart Grid industry.

Only SGIP brings together all the sectors of the energy industry to focus on a single outcome—the shaping of interoperability standards that help make products secure and easier to integrate while reducing cost and speeding products to market. SGIP is uniquely positioned to facilitate the coordination of standards that make a difference between success and failure in the world energy marketplace.

### ***Resource: “Train the Trainer” Sets from CSWG***

The CSWG’s Privacy Subgroup has developed several slide decks to provide information as a way to help "train the trainer" regarding Smart Grid privacy.

- A starting point for those within Public Utilities or Services Commissions to help them effectively and efficiently plan for their own internal information security and privacy education program as it relates to Smart Grid privacy.
- One for use by organizations that are part of the Smart Grid; the “Consumers” deck is intended to help organizations answer consumer questions about privacy concerns.
- A starting point for utilities to effectively and efficiently plan for their own internal information security and privacy education program as it relates to the Smart Grid.

These slides provide advice and assistance for the organizations to create their own awareness and training content. The Group provided significant additional information within the speaker notes, along with many pointers to other information resources, that organizations may wish to use when delivering their own tailored training.
